

Example Louver Panel Options

Operable Louver Panels:

Operable aluminum louver panels up to 2" deep can be installed with the frames of Arm-R-Lite's welded aluminum and glass sectional doors. Operable louvers can be opened and closed to allow or restrict ventilation.

Alternate operable louver designs are available – please consult factory.

Fixed "Stamped" Louvers

Stamped aluminum louvers are available as a custom option to aid in ventilation. Common applications include parking garages, storage and maintenance facilities, and body shops.

Stamped louvers are created using an aluminum sheet with "slots" that cannot be closed. Consult factory regarding your choice of louver design.

****Consult factory regarding finish options****

Panels shown are style examples. Please contact our customer service and sales staff for specific panel designs.
